

SOO JIAN LIN

Final-Year Information Technology Student | Data, Software & Industrial IT Internship Candidate

Seremban, Negeri Sembilan | +60 18-288 2961 | soojianlin@gmail.com | <https://jens0343.github.io/Portfolio/>

PROFILE

Final-year Bachelor of Information Technology student specializing in Industrial Intelligent Systems, seeking a one-year internship in data analytics, software development, enterprise systems, or industrial IT. Brings hands-on project experience in full-stack web delivery, manufacturing process simulation, AI defect classification, SQL/database fundamentals, and practical operations coordination.

CORE STRENGTHS

- Data and AI: manufacturing defect classification, image-data workflow, IoU evaluation, SQL and MySQL fundamentals.
- Software development: React, Firebase, Tailwind CSS, reusable UI components, responsive delivery, and production hosting.
- Enterprise and industrial IT: ERP fundamentals, business process thinking, SDLC, database normalization, and manufacturing workflow awareness.

EDUCATION

Bachelor of Information Technology | Universiti Tunku Abdul Rahman (UTAR)

Expected graduation: 2027 | CGPA: 3.0 | Focus: Industrial Intelligent Systems

TECHNICAL SKILLS

Programming: Java, Python, C++, JavaScript, HTML, CSS

Data & Database: SQL, MySQL, database design, normalization, data preprocessing, model evaluation metrics

Full Stack: React, Tailwind CSS, Firebase, Git, VS Code, responsive UI, reusable components

Industrial / Enterprise: ERP fundamentals, SDLC, OT basics, PLC/SCADA concepts, process simulation, AWS/Azure concepts

SELECTED PROJECTS

Full-Stack Booking Platform | *React, Firebase, Tailwind CSS*

- Designed and developed an end-to-end homestay/room booking platform covering browse, select, and book workflows across KL, Negeri Sembilan, and Melaka.
- Implemented a mobile-first responsive interface across 7+ modules using Tailwind breakpoints and reusable front-end components.
- Delivered client-requested custom functions that improved booking efficiency by approx. 50% and reduced manual enquiries.
- Deployed a production-ready application using Firebase Hosting.

Industrial Packaging Simulation System | *AnyLogic, Process Simulation*

- Built a multi-stage packaging workflow model covering conveyor, filling, sealing, and dispatch operations.
- Designed logic-based routing for ordinary, fragile, and hazardous item flows to analyze throughput and operational efficiency.
- Applied systems modeling concepts relevant to manufacturing process improvement and enterprise workflow understanding.

AI Defect Classification System | *Computer Vision, U-Net Concept, MVTec AD Dataset*

- Developed an anomaly-detection workflow for identifying manufacturing defects using image datasets.
- Applied segmentation concepts and IoU-based model evaluation while practicing data preprocessing and performance assessment.
- Explored practical AI use cases for automated quality inspection in manufacturing environments.

EXPERIENCE

Kindergarten Teacher & Administrative Assistant | 2026

- Managed daily scheduling, student records, communication, and administrative workflows in a fast-moving service environment.
- Prepared structured lesson plans and coordinated classroom activities, strengthening communication, documentation, and multitasking skills.

LEADERSHIP & ACTIVITIES

- Hackathons: DevMatch Hackathon (Stablecoin Micropayments Track), Great Malaysia AI (APU) 2025, KitaHack 2026.
- Volunteer/Ops: Google News Innovation Forum volunteer; APAC Predator League / concert operations crew and supervisor.
- DevMatch project: developed StreamDrop, a pay-per-minute content streaming dApp concept using stablecoins on Layer 2 networks.
